

# ProLight SOLAR Lighting

The AWARD-WINNING ProLight is the only mobile solar lighting tower in the UK that operates reliably all year round, even in challenging winter conditions. The ProLight delivers powerful light without noise or emissions and offers a robust alternative to temporary diesel lighting for infrastructure, construction projects and events.

The ProLight will never need to be refuelled and its digital, in-built, remote control function means you can alter its settings as required to suit the light conditions without the need to attend the light on site.

It is straightforward to switch to ProLight. For contractors and events organisers, the ProLight is a 'use and forget' asset that makes no noise and does not need to be refuelled or serviced.
